<p>NOTE: Summary of the principal features of the LobePro API 676 compliant pump. There are many other provisions of API 676 which apply to the pump. Our API series pumps comply with all of these provisions. *: Our mechanical seals do not comply with API-682 due to the space and design parameters of the pump. However, our seal is not an exception and is considered an "Engineered Seal" under API 676 Revision 4. Flushing with pumped fluid (sludge/slurry) not desirable. Optional Plan 99 Oil Flush System available.</p>

Standard Tests

Test Description

- Hydrostatic Test**
- Run Test**
- Performance Test**
- Sound Test**
- Documentation Included**

Operates without leaking at 150% of MACP when hydro tested
 Tested to determine if the pump operates without excessive vibration or seal leaks throughout operating range.
 Tested at duty point to confirm pump curve.
 Shall be under 85 db's at a distance of 3 ft. (1 meter).
 IOM section with material certifications, test data and results, record of heat treatments, results of quality control tests, and other data as agreed with Purchaser

L266 CURVES

Performance Curve - NBR Lobes*

Based on 70°F (21°C) fresh water (1 cp) at Sea Level.
 Output will increase as viscosity of the fluid increases from 1.

*Note: Output from lobes coated with elastomers other than NBR maybe lower. Contact Engineering for further information.
