

# THE CHOICE FOR **PUMPING** **LIQUID MANURE**

**LOBEPRO**  
ROTARY PUMPS

LobePro's rotary pumps are the choice for pumping biofuel, biomass, and liquid manure thanks to the combination of durability, efficiency, and flexibility engineered into each pump design.

# WHY CHOOSE **LOBEPRO** **ROTARY PUMPS?**

**Excellent solid-handling capability** that allows fibrous bedding, straw and grit to pass without clogging.

**Dry Run capabilities** that prevent immediate damage if the pump runs briefly without liquid.

**Self-priming and strong suction lift** for pit and lagoon emptying without the need for additional priming equipment.

**Low-shear, positive displacement flow** that delivers consistent, volumetric flow without affecting the integrity of solids passing through the pump.

**Made from abrasion and corrosion-resistant materials** for long-lasting performance even in heavy-duty applications.

**Maintenance-friendly sealing and shaft arrangements** for streamlined, simple maintenance without full pump removal.

**Reversible rotation and non-directional performance** that provides simpler unclogging, flexible installation, and reduced maintenance time.

**Compact, lightweight design** for a smaller footprint and simpler mounting options.

**Highly versatile operation** with a wide operating speed range and multiple drive options.

**Made in the USA** to the standard of quality and performance required for an American-made product.

**Responsive Customer and Technical Support** on every product we make, as well as efficient troubleshooting and field services.

# DAIRY FARM AND RELATED APPLICATIONS OF LOBEPRO ROTARY PUMPS

- Mobile and permanent tanker loading and unloading
- Emergency truck and contractor transfer
- Pit and reception sump emptying
- Feed to separators and solids-liquid separation
- Manure recirculation and storage transfer
- Feeding anaerobic digesters and biogas systems
- Blending and slurry conditioning
- Washdown circulation and wash-water recovery
- On-farm mobile equipment and trailer systems

Contact LobePro for application sizing, on-site evaluation or simply discuss your liquid manure operational concerns, and get direct access to our engineers and technicians for practical support, solutions, and system optimization.
